

Nebulizer set

It makes the medicine in liquid form to an aerosol and provides the medicine to reach the respiratory tract during the patient's breathing with the help of the mask.

Features

Masks are designed in four different sizes according to the needs of newborn, infant, child and adult patients. Soft and compatible with the facial features masks with the nose clip covers the mouth and nose. Fixation elastic that surrounds the head. The oxygen connection hose is designed with multiple channels and is produced resistant to breakage and bending, so that the oxygen flow continues without obstruction. It is compatible with central and other gas supply systems with the standard connection connector.

Medicine Reservoir With the low residual rate calibrated reservoir, the nebulizer medicine loss is minimized. It can be opened and closed with a quarter turn with the the lid lock system that allows quick mounting to the reservoir. In ongoing treatments, medication can be added by opening the small cover on the top while the set is on the patient face. The reservoir delivers high performance aerosol providing optimum particle size at angles up to 90 degrees. Sealing lid to prevent spillage and 6cc capacity reservoir.

Quality

- * ISO 13485:2016
- * CE certificated

Shelf Life

5 Years

Standard 17 m tip

Masks, T Parts, Mouthpieces.

Fast application

Easy fluid addition, performance adjustment.

Calibrated drug reservoir

Accurate and fast preparation.

Low residual volume

Prevent waste drug generation.
