Tenaculum Forceps

Ngyn Tenaculum forceps produced with USP Class VI material features superior rigidity, safety and stability. This makes it exceptional among other plastic instruments.

Ngyn Tenaculum is ideal for holding the front lip of the cervix during procedures.

The secure locking mechanism and special design brings a great benefit with low cost.

Delivered sterile and easy to dispose as it is for single use. It offers safety, while showing responsible approach to the environment.

Ngyn Tenaculum is available in two forms: straight and curved, both enhancing visibility. They may be purchased as part of our IUD procedure packs or as bulk components.

Ref. SP007 Tenaculum Forceps-Straight version, 260 mm, Non-Sterile

Ref. NP0101 Tenaculum Forceps-Straight version, 260 mm, EO-Sterile

Ref. SP015 Tenaculum Forceps-Straight version, 260 mm , Non-Sterile

Ref. NP0103 Tenaculum Forceps-Straight version, 260 mm , EO-Sterile

Cheron Forceps

Ngyn Cheron forceps produced with USP Class VI material features superior rigidity, safety and stability. This makes it exceptional among other plastic instruments.

Thanks to special design and high-grade plastic, Cheron Forceps provides holding swabs and removing coils by only using single device. This makes it an important cost-effective alternative.

Ngyn Cheron forceps is available in two forms: straight and curved, both enhancing visibility. They may be purchased as part of our IUD procedure packs or as bulk components.

Delivered sterile and easy to dispose since it is for single use. It offers safety, while showing responsible approach to the environment.
