The materials used in the gowns is made of medical grade materials.

These extra protection gowns have an additional layer of absorbent material from wrist to elbow and over the front section.Ideal for longer procedures and those with a large amount of fluids.

They are ideal for heavy procedures where strike-through and two-way contamination of the surgeon and patient could occur.

Gown fabric allows the skin to breathe, but it will remove alcohol, blood and similar body fluids from the environment and do not allow it to pass to the bottom.
